WORK & RESEARCH EXPERIENCE

Apr - Sep 2019	CIIRC (Czech Institute of Informatics, Robotics and Cybernetics) <i>Research Intern</i> , Prague Under the supervision of Tomas Mikolov (Facebook AI). <ul style="list-style-type: none">Studied emergence, complexity and spontaneous organization in complex systems and their applications to Artificial intelligence.Constructed a neural network-based complexity metric for measuring emergence in dynamical systems (implemented in C). [GitHub]
Mar - Sep 2018	INRIA and CNRS (LIMSI) <i>Research Intern</i> , Paris Under the supervision of Xavier Tannier and Ioana Manolescu. <ul style="list-style-type: none">Built a pipeline builder for extracting and integrating multiple data sources with NLP and data processing algorithms for data journalism. [GitHub]Worked with journalists from <i>Le Monde (Les Décodeurs)</i> on automating their data processing pipelines and using NLP for their investigations.Reviewed literature on machine learning in graphs, automatic knowledge base construction and natural language processing for fact checking.
Jun - Sep 2017 (Part-time) Oct 2017 - Mar 2018	Aiden.ai (start-up) <i>Software engineering and Machine Learning Intern</i> , London Worked on building an AI powered virtual colleague for Marketing analysts based on Natural Language Processing. Implemented machine learning pipelines with Python for marketing data forecasting, classification and user clustering. Participated in implementing the chat interface and the Natural Language recognition system with Javascript .
Sep 2016 - Feb 2017	ENS Ulm, Kastler-Brossel Laboratory <i>Research assistant</i> , Paris Light control and propagation in amplified multimode fibers Implemented and optimized finite elements simulations with Python and Matlab . Performed high performance computing on large distributed clusters. Worked with a PhD candidate on building a tool for optimizing the propagation of a light beam in optical fibers.
Nov 2015 - Jan 2016	Mines ParisTech <i>Team member of Smart-grid project</i> , Sophia-Antipolis Built with a team of 9 a functioning software prototype for managing the electricity consumption of a building through the control of electrical devices. Implemented real-time electricity market data processing in Python .
